Experience

Frontend Developer Contractor · LRS   Feb '23 - Present

· Developed a real-time GPS system that reads from Serial Ports for marine sightings, providing accurate location tracking for NOAA scientists.
· Enabled NOAA scientists to log physical sighting recordings into the Progressive Web App (PWA) built in React, which then plotted these recordings on the GPS chart for comprehensive analysis.
· Participated actively in requirements gathering and documentation with stakeholders, prioritizing customer-centric development.

Software Engineer, Frontend · Loyal Health   Feb '22 - Feb '23

· Contributed to the development of a Patient Management App in React, helping healthcare providers track and manage potential patient leads more efficiently.
· Focused on improving data accuracy and access, ensuring that healthcare providers had reliable and current information on potential leads.
· Applied optimization techniques to boost application performance and scalability, achieving faster load times and a smoother user experience.

Frontend Developer · Limosys LLC   May '21 - Feb '22

· Developed an Affiliate Portal for Limosys, helping small driving service companies efficiently share and manage ride requests with a network of affiliates. This tool enhanced their ability to handle jobs in different geographic areas, boosting their operational capacity and service reach.
· Contributed to the development of a shuttle app in React Native, equipping users with features for booking, managing, and canceling shuttle rides. This app greatly improved the convenience and reliability of the shuttle service for users.

Intern Frontend Developer · Logie Inc   Feb '21 - May '21

· Contributed to the frontend development of Logie, an application designed to connect brands with Amazon Live streamers. The platform facilitated targeted partnerships, helping brands reach suitable influencers for product promotions, thereby enhancing marketing efficiency and audience engagement.
· Worked on a small team of developers to create the Logie application from scratch, building entire pages and functionalities based on directives from the team lead and specifications from the CEO's design and business requirements.

Intern Software Engineer · TWG Companies   Oct '20 - Feb '21

· Developed the frontend for Lachlist, a service review platform, crafting the landing page and user registration forms, and implementing features that enable retrieval and display of customer reviews from the database. This work enhances user interaction and supports informed decision-making about service providers.
·
